

Software:
Dual Booting & Linux

Tuesday 11/18

Debrief

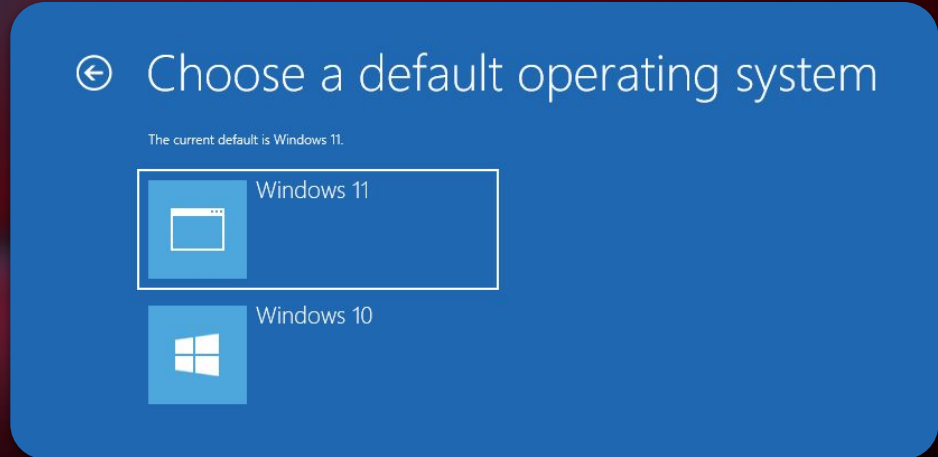

Main goal of this meeting:

- Explain the basics of Dual Booting
- Introduce linux
- Discuss our next meeting

Dual Booting with Windows

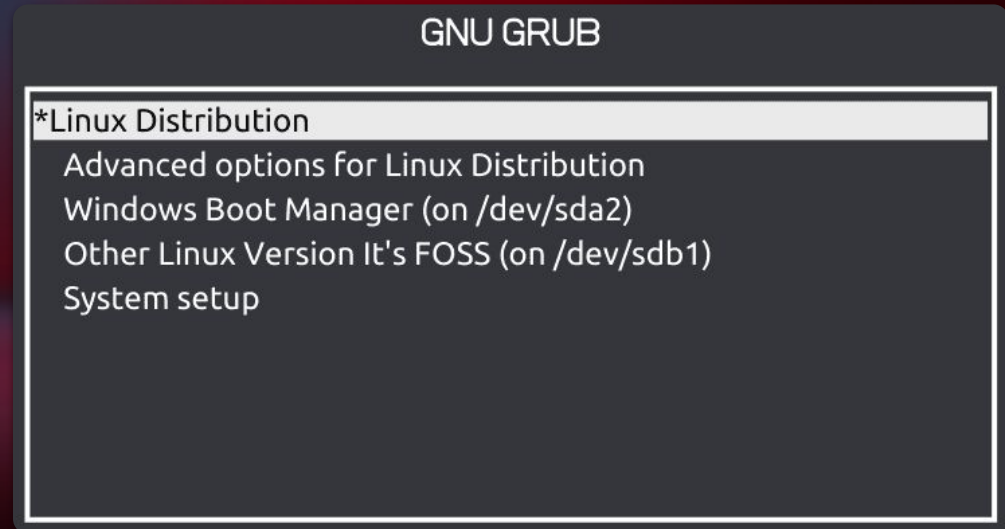

- Windows automatically detects other operating systems present on the same, or other drives.
- When setting up windows, choosing a default 'boot loader' is not necessary, and is already installed
- With Windows, dual Booting is plug and play. Generally, you will not need to touch the BIOS or any other settings.

Dual Booting With Linux

- Linux is generally more difficult, as skipping options may create issues in the future.
- Unlike Windows, Linux requires an option to be chosen during setup or dual booting may not be possible.
- The most common linux boot loader is GRUB, simple but feature rich.

Install the GRUB boot loader on a hard disk

You need to make the newly installed system bootable, by installing the GRUB boot loader on a bootable device. The usual way to do this is to install GRUB on the master boot record of your first hard drive. If you prefer, you can install GRUB elsewhere on the drive, or to another drive, or even to a floppy.

Device for boot loader installation:

Enter device manually

/dev/sda (ata-32USBDebian-0_SSD_T964Q44JSKMM1FTBFR1N)

/dev/sdb (usb-VendorC_ProductCode_FC2655C027225-0:0)

these were supposed to be filled out.

How We Will Do It

For our demonstration next meeting, we will install Linux on a second HDD installed in the club computer. We will walk through the Linux installation process using Debian 12 as our Linux distro.

Afterwards, if time permits we will show the functions of the GRUB boot loader and how to switch between Windows and Linux.

Next Meeting

12/1

Ground plan:

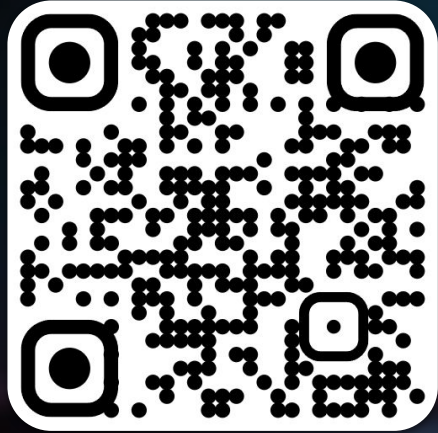

- No meeting next week!
Thanksgiving break
- Perform dual booting with
Linux & Windows
