**Hardware:
Technology Upkeep**

Tuesday 11/4

First...

- **Desktops:**

Switch off power supply and unplug the power cord

Take off side panels, filters, and other removable parts

Unplug fans if necessary

- **Laptops:**

Unscrew the button panel and remove it and unplug the battery

* Removing any parts from your laptop may void its warranty

General Upkeep

- **Filters:**

Clean filters often as they collect most of the dust entering your computer

- **Fans:**

Clean fans as more dust equals less airflow, and significant drag. Don't spin the fans when blowing air through them!

- **Heatsinks:**

Clogged heatsinks block airflow and increase heat

- **Laptops:**

Carefully open up chassis, gently blow/dust fans, clean heat sinks with a brush, compressed air or cloth

General Software Upkeep

- Clearing recycle bin often
- Uninstall unused apps, and ensure all program files are properly deleted
- Don't download suspicious files
- Keep programs updated, and remove old update files

Today...

Next Meeting

11/11

Ground plan:

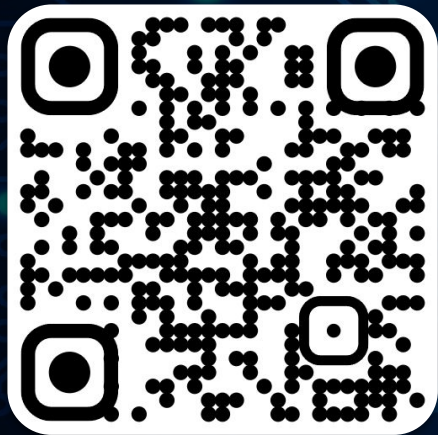

- Hands on desktop upkeep
- Finishing what we started...
